

NAME: MIKO VARGAS
NO. OF HOURS FINISHED: 120H

YEAR & COURSE: BSIT
DATE STARTED: 02/2/2026 **DATE ENDED:** 02/18/2026

No.3.e Part I. LEARNING OUTCOME

ICT Equipment
Inventory

Installation of additional access
point

Conducting a print head
cleaning

PROBLEM(S) ENCOUNTERED

While completing the tasks assigned throughout the reporting period, a number of difficulties arose that called for perseverance, meticulous preparation, and efficient problem-solving. Making contact with schools about their NCAE payroll was one of the biggest obstacles. At first, it was challenging to get in touch with a number of schools since they were unresponsive or had insufficient contact details. Due to this, there were slight delays in making sure that all test administrators were paid on schedule. To make sure that no school was left neglected and that all payroll issues were resolved as soon as possible, repeated follow-ups and tenacious communication were required.

Also, there were logistical difficulties in carrying out the inventory of ICT equipment in the Sigasig Building. To prevent inconsistencies, meticulous attention to detail was needed to coordinate access to the storage space, confirm the equipment's condition, and cross-check documents. Colleagues had to work closely together to make sure that everything was accurately recorded and accounted for, which put the team's cooperation and organizational abilities to the test.

While debugging the network at the HNU office, another major obstacle arose. Using LAN cable tray tracers, the team tried to find network nodes, but after extensive searching, they were not located. Network diagnostics were delayed as a result, and the team had to revise their plans and think of other options. Access points were then installed in a number of locations, including

the HNU, CID, and SGOD offices, due to weak signal strength in several parts of the workplace. To ensure seamless operations across all departments, this endeavor required careful planning and precise technological tweaks to enhance network connectivity.

There were additional difficulties in creating the Helpdesk monthly narrative report. It required rigorous research and attention to detail to compile and organize data from January 19 to 30 while guaranteeing correctness in the resolution of 16 service tickets. It was crucial to show how many problems were fixed as well as how well and consistently they were handled.

Despite these obstacles, aggressive follow-up, efficient communication with coworkers and outside contacts, and the constant application of technical expertise and organizational abilities allowed all tasks to be finished effectively. These encounters reaffirmed the value of tenacity, persistence, cooperation, and problem-solving in conquering challenges. In the end, they helped the department's administrative and technical operations run smoothly and effectively by highlighting the importance of patience, time management skills, and flexibility in the face of unforeseen challenges.

BEST SOLUTION TO THE PROBLEM

To address the challenges encountered, maintaining an updated contact list and conducting regular follow-ups will ensure timely delivery of NCAE payroll. For ICT inventory, a standardized system with clear labeling and digital records will prevent discrepancies. Network issues can be minimized through regular audits, proper documentation of nodes, and installation of access points in weak signal areas. Finally, structured Helpdesk tracking and continuous staff training will improve efficiency and reliability in resolving service requests.

LEARNING EXPERIENCES WITHIN THE PERIOD OF THIS

During this period, I gained valuable insights and practical skills in administrative and technical tasks. I learned the importance of persistence and effective communication while contacting schools for their NCAE payroll, ensuring that no school was left unattended. Conducting the ICT equipment inventory enhanced my organizational skills and attention to detail, as well as the ability to coordinate efficiently with colleagues.

The experience in network troubleshooting and installing access points strengthened my technical knowledge in IT infrastructure and problem-solving, particularly in identifying weak signal areas and implementing practical solutions. Preparing the Helpdesk monthly report improved my ability to analyze data, document resolutions, and present findings clearly and accurately.

Overall, these activities reinforced the value of patience, teamwork, adaptability, and proactive follow-up, contributing significantly to my personal and professional growth within the department.
